DAY #1

OVERVIEW

Microsoft PowerPoint is presentation software that allows you to create dynamic slide presentations that include animation, narration, images, videos and more. These features are meant to accompany the oral delivery of the topic.

Originally designed for the Macintosh computer, the initial release was called "Presenter", developed by Dennis Austin and Thomas Rudkin of Forethought, Inc. In 1987, it was renamed to "PowerPoint" due to problems with trademarks.

In August of the same year, Forethought was bought by Microsoft for \$14 million USD (\$29.1 million in present-day terms), and became Microsoft's Graphics Business Unit.

As of 2012, various versions of PowerPoint claim 95% of the presentation software market share, with installations on at least 1 billion computers. Among presenters world-wide, this program is used at an estimated frequency of 350 times per second.

What is Microsoft Office? The term "Microsoft Office" refers to Microsoft's entire suite of office productivity applications. Microsoft PowerPoint is one of the many applications that are grouped under of the "Microsoft Office" umbrella.

What is Office 365? Office 365 is a service where you pay a monthly subscription fee (around \$10 a month) to use Microsoft Office programs (as opposed to paying \$100 or more up front, as was traditionally done). One benefit to using Office 365 is that software updates are free (for example, if a new version of Microsoft PowerPoint comes out, you can upgrade to that new version for free).

In this class, we will be using PowerPoint 2016, which is the latest version.

LEARNING OBJECTIVES

At the end of this module, you will be able to:

1. Become familiar with Power Point Interface
 2. Create a new presentation and save it
 3. Add slides to a presentation
 4. Delete and Rearrange slides
 5. Apply a design theme
 6. Work with themes and background styles
 7. Use the various PowerPoint views
 8. Enter and edit text
-

9. Insert graphics and other objects
 10. Play the slideshow
 11. Print handouts
-

BEST PRACTICES FOR CREATING PRESENTATIONS

Slide layout, font, color scheme, and content are the main components to developing a great presentation. Follow the guidelines below to create a good presentation:

1. Identify the critical information that needs to be presented and include it in your presentation.
 2. Use no more than six bullet points per slide.
 3. Keep bullet points short and to the point. Incomplete sentences are okay.
 4. Minimize the number of font types used in your presentation.
 5. Keep font sizes consistent.
 6. Do not make all of the text uppercase.
 7. For contrast, use a light-colored font on a dark background and vice versa.
 8. Use bold formatting to make appropriate words stand out.
 9. Minimize the use of italics. They are more difficult to read.
 10. Do not vary the look of one slide greatly from the next. Consistency is key.
 11. Identify text that can be represented pictorially and use appropriate graphics in its place.
 12. Remove unnecessary graphics that are not relevant to the information presented.
 13. Use consistent colors and font size on each slide.
 14. Do not use unusually bright colors.
 15. Do not clutter the slides with too many graphics.
 16. Use graphics and transitions sparingly.
-

THE MICROSOFT POWERPOINT 2016 INTERFACE

There are a number of prominent changes to the look and functionality of Microsoft PowerPoint 2016.

Let us have a look at its latest interface.

Figure 1 - The Interface

- 1) **Quick Access Toolbar** - Allows you to keep shortcuts to your favorite and frequently used tools.
- 2) **Ribbon Display Options** - You can collapse, auto hide, or show the whole ribbon.
- 3) **File Tab (Backstage View)** - The backstage view is where you manage your files and the information/properties about them (e.g. open, save, print, protect document, etc.).
- 4) **Ribbon** - Tabbed interface, where you can access the tools for formatting your presentation. The Home tab will be used more frequently than the others.
- 5) **Tell Me** - Look up PowerPoint tools, get help, or search the web.
- 6) **Collapse the Ribbon** - This button will collapse the ribbon. Click on the pinned icon to re-open the ribbon.
- 7) **Mini Toolbar** - Select or right-click text or objects to get a mini formatting toolbar.
- 8) **Slides Tab** - Use this to navigate through your slides within your presentation.
- 9) **Slide** - This is where you type, edit, insert content into your selected slide.
- 10) **Status Bar** - View which slide you are currently on, how many slides there are, speaker notes or comments in your presentation, change your views, or change your zoom level.

THE RIBBON

The ribbon is a panel that contains functional groupings of buttons and drop-down lists organized by tabs (see Figure 2). The ribbon is designed to help you quickly find the commands that you need to complete a task.

Figure 2 - The Ribbon

The ribbon is made up of a set of tabs that pertain to the different functionalities of PowerPoint, such as designing slides, inserting media onto slides, or applying animations.

Each tab is further divided into logical groups (of buttons), such as the Font group shown in Figure 1 above.

There are also other buttons that appear depending on what you are working on.

For example, if you have inserted pictures, the Picture Tools tab appears whenever a picture is selected (See Figure 3).

Figure 3 - Contextual Tab

THE QUICK ACCESS TOOLBAR

The Quick Access Toolbar is a small toolbar at the top left of the application window that you can customize to contain the buttons for the functions that you use most often.

To customize the Quick Access Toolbar:

- 1) Click the **drop-down** arrow on the far right (See Figure 5).
- 2) Click on any **listed command** to add it to the Quick Access Toolbar (See Figure 5).
- 3) Click **More Commands...** to choose from a comprehensive list of commands (See Figure 5)
- 4) Select a command from the list by clicking on it (See Figure 6).
- 5) Click the Add button (See Figure 6).
- 6) Repeat steps 4 & 5 to add additional commands (See Figure 6).

Figure 4 - Customize Quick Access Toolbar

- Click on the OK button to confirm your selection (See Figure 6).

TELL ME

The Tell Me feature allows users to enter words and phrases related to what you want to do next to quickly access features or actions.

It can also be used to look up helpful information related to the topic. It is located on the Menu bar, above the Ribbon.

Search for Features

- Click in the Tell Me box.

Figure 6 - Quick Access Toolbar Options

Figure 8 - Tell Me

- Type the **feature** you are looking for (See Figure 8).
- In the Tell Me drop-down, you will receive a list of features based on your search. Click the **Feature** you were looking for (See Figure 8).
- You will either be taken to the feature or a dialog box of that feature will open.

Figure 7 - Select a Feature

GET HELP WITH POWERPOINT

- Click in the **Tell Me** box.
- Type the **feature** you want help with (See Figure 9).
- In the *Tell Me* drop-down, click **Get Help on feature** (See Figure 9 on the right).
- In the PowerPoint 2016 Help dialog box, you will get a list of help topics based on your search. Click the **Topic** you wanted help with.

Figure 9 - Get Help on Feature

EXERCISE

- PowerPoint is best described as:

- A. Database Software
- B. Presentation Software.
- C. Desktop Publishing Software

2. You can insert the following on a slide:

- A. Text
- B. Picture
- C. Chart
- D. All of the above.

3. During a slide show, pressing the Esc key:

- A. Displays the last slide
- B. Ends slide show.
- C. Displays the first slide

4. Slides cannot be deleted.

- A. True
- B. False.

5. PowerPoint is saved as:

- A. .docx
- B. .pptx.
- C. .xlsx

6. We add themes to our slides by clicking the:

- A. Design tab.
- B. Home tab
- C. Animations tab

7. You can hide a slide that you don't want to appear in a slide show.

- A. True.
- B. False

8. We use Microsoft office Button to save our presentation in the latest Microsoft Office versions:

- A. True
- B. False.

9. You can re-arrange slides in:

- 1. Slide view
- 2. Sorter view.
- 3. Notes page View

10. Create a presentation that consists of 4 slides

➤ **SLIDE ONE: use title layout**

- Title: **"The Seasons"**
- Subtitle: BY: **"Your Name"**

➤ **SLIDE TWO: use title and content layout**

- Title: **SPRING**
- March 20th is the first day of Spring
- Spring lasts from March to June
- Observed holidays during this season are Easter, Mother's and Father's Day

➤ **SLIDE THREE: use title and content layout**

- Title: **SUMMER**
- June 20th is the first day of Summer
- Summer lasts from June to September
- Observed holidays during this season are Independence Day and Labor Day

➤ **SLIDE FOUR: use title and content layout**

- Title: **AUTUMN**
- September 22nd is the first day of Autumn
- Autumn lasts from September to December
- Observed holidays during this season are Veteran's Day, Election Day

➤ SLIDE FIVE: use title and content layout

- Title: **WINTER**
- December 21st is the first day of Winter
- Winter lasts from December to March
- Observed holidays during this season are Christmas, New Year's, Valentine's and St. Patrick's Day

DAY #2

GALLERIES

A Gallery is a collection of pre-defined formats which can be applied to various elements in Office applications, such as the Themes Gallery in PowerPoint (See Figure 14). A Gallery most often appears as a result of clicking on an item on one of the Ribbon tabs.

Figure 14 - Theme Gallery

MINI TOOLBAR

The Mini Toolbar is a semi-transparent toolbar that appears when you select text (See Figure 15).

When the mouse cursor hovers over the Mini Toolbar, it becomes completely solid and can be used to format the selected text.

Figure 15 - Mini Toolbar

STATUS BAR

The Status Bar can be customized to display specific information. Below, in Figure 16, is the default

Status Bar for PowerPoint:

Figure 16 - Status Bar

Right-clicking on the Status Bar brings up the menu to the right, which enables you to change the contents of the Status Bar by checking or un-checking an item.

THEMES

A Theme is a set of formatting options that is applied to an entire presentation. A theme includes a set of colors, a set of fonts, and a set of effects.

Using themes shortens formatting time and provides a unified, professional appearance.

The Themes group is located on the Design tab; it allows you to select a theme from the Themes Gallery, apply variants, and customize the colors, fonts, and effects of a theme (see Figure 18).

Figure 18 - Design Tab: Themes

Applying a Theme to a Presentation

1. On the Ribbon, select the Design tab (See Figure 18).
2. Click the arrows to scroll to additional themes.
3. Select a theme by clicking on the thumbnail of your choice within the Themes group.

Figure 19 - Themes

Applying a Theme Variant

1. On the Ribbon, select the **Design tab** (See Figure 18).
2. In the Variants group, hover over a **variant** with your mouse to see a preview.
3. Click the **down-arrow** to view any additional variants (See Figure 20).
4. Select a **variant** by clicking the thumbnail of your choice within the Variants group.

Changing the Color Scheme of a Theme

It may be necessary to change the color of a theme to better suit your presentation.

In order to change the color scheme after applying a theme to your presentation:

1. From the Variants group, click the **down arrow** with the line above it, in the bottom right corner.
2. Select colors from the menu.
3. Select a color scheme from the list that appears.

Figure 20 - Variants Gallery

Figure 21 - Variants Drop-down

Changing the Fonts of a Theme

In order to change the fonts of an applied theme:

1. From the Variants group, click the **down arrow** with the line above it, in the bottom right corner (See Figure 21).
2. Select **Fonts** from the menu.
3. Select your desired font from the list that appears.

Changing the Effects of a Theme

In order to alter the visual effects of an applied theme:

1. From the *Variants* group, click the down arrow with the line above it, in the bottom right corner (See Figure 21).
2. Select **Effects** from the menu.
3. Select your desired effect from the list that appears.

THE FILE TAB

The File tab, shown below in Figure 25, provides a centralized location called the Microsoft Office Backstage view (see Figure 26).

The Backstage view is used for all tasks related to PowerPoint file management: opening, creating, closing, sharing, saving, printing, converting to PDF, emailing, and publishing.

The Backstage view also allows for viewing document properties, setting permissions, and managing different versions of the same document.

Navigation

PowerPoint 2016 opens in the Normal View showing the Slides Pane on the left side of the window.

Slides Pane

The Slides pane shown on in *Figure 27*, displays all the slides available in a presentation and helps to navigate through the presentation.

The slides are listed in sequence and you can shuffle the slides by dragging a slide from the current location and placing it in the preferred location.

Figure 25 - File Tab

Figure 26 - Backstage View

Slide Preview

Select a slide in the slides pane to preview it in the Slide Preview window.

The slide preview allows you to see how your text looks on each slide. You can add graphics, video and audio, create hyperlinks, and add animations to individual slides.

- From the beginning: **Press the F5 key.**
- From the current slide: **Press Shift + F5.**
- Menu: **Go to the Slide Show tab and select "From Beginning" or "From Current Slide".**

Notes Pane

It can be helpful to use the Notes Pane to remind yourself of speaking points for your presentation (see Figure 27).

These personal notes can also be printed out for future referencing. Notes entered in the Notes Pane will not appear on the slide show.

- If you don't see it, **click View > Normal**

Figure 27 - Normal View

CHANGING VIEWS

PowerPoint allows you to see and edit your slides in several views.

To work with your presentation in a different view, click the View tab on the ribbon (see Figure 28) and select the appropriate view, or, click on the appropriate Shortcut button at the bottom right area of the Status Bar (see Figure 29).

Figure 28 - View Tab

Figure 29 - Status Bar

EXERCISE

- _____ are the individual parts of PowerPoint that when several are put together create a presentation.
 - Slides.
 - Frames
 - Parts
 - Sections
- When you create a link out of words or an image, the technical term for that is _____.
 - Hyperlink.
 - Superlink
 - Actionlink
 - Special link
- We use _____ and/or _____ to put information such as slide number in the upper and lower margins of our work.
 - Tops; bottoms
 - Headers; footers.

- C. Upside; downside
 - D. Beginning; ending
-
4. If you wanted to draw out a certain area in your slide where you would like to write in, you could use a _____.
-
- A. TextBox.
 - B. WriteBox
 - C. WordBox
 - D. BigBox
-
5. You have just changed your slides to a light blue shade, what did you modify?
-
- A. Visual controls
 - B. Settings
 - C. Arena
 - D. Background.
-
6. Chuck Norris sends his PowerPoint presentation to Jackie Chan, however Jackie cannot open the file to edit even though he has Office 2003, what is the problem?
-
- A. Chuck saved his presentation in an Office 2007 format; Office 2003 cannot by default open Office 2007 files.
 - B. Jackie does not know how to use a computer and should hire a professional to help him
 - C. The file was damaged during Internet transport and Jackie needs to use a file fixing program before opening the file...
 - D. Chuck did not actually save his work, but has accidentally sent Jackie a blank document
-
7. _____ can be used to create an effect between slide changes.
-
- A. Changes
 - B. Transitions.
 - C. Special effects
 - D. Visual styles
-
8. 7C wants to know how to put in a text box, how do you do that?
-

- A. Kelsey suggests clicking on the Insert tab and going to WordArt
 - B. Esewole thinks the way would be to go to the home tab and select the writing box icon
 - C. Zasha thinks the best way would be to click on the insert tab and then use the text box button.
 - D. Axel suggests the best way is to point at the computer and say, "COMPUTER! TEXT BOX NOW!"
-
9. You would use an _____ to move a clipart of a basketball from one side of the slide to the other.
-
- A. Animation.
 - B. Movement
 - C. Movie
 - D. Slider
-
10. PowerPoint can _____, but you must be careful if using this during a presentation so you do not have a runaway slideshow.
-
- A. Advance slides automatically.
 - B. Advance slides on clicking only
 - C. Advance slides by using mind power
 - D. Advanced slides by making Axel, Justis, Chloe, Yousf, or a P.E. coach do it for you
-
11. Using _____ you can create a TextBox or Star among many other forms.
-
- A. Brush tool
 - B. Shapes.
 - C. Clipart
 - D. Smartart
-
12. PowerPoint is ideal for writing lengthy documents about history.
-
- A. TRUE
 - B. FALSE.
 - C. IT DEPENDS
 - D. I DON'T KNOW
-

13. PowerPoint is ideal for keeping track of several grade books for a teacher.

- A. TRUE
- B. FALSE.
- C. SEMI-TRUE

14. SmartArt is used to _____ communicate information.

- A. Digitally
- B. Textually
- C. Visually.
- D. Slide show

15. _____ are a quick way of inserting a pre-made look/setup to your presentation.

- A. Backgrounds
- B. Settings
- C. Special images
- D. Themes.

16. _____ is used to create custom shapes from words.

- A. Keyboardart
- B. Changeart
- C. Wordart.
- D. Clipart

17. _____ can be inserted into PowerPoint, say if you wanted a graphical representation of Election results, however you will be inserting your information essentially within an _____ sheet.

- A. Actions; PowerPoint
- B. Links; web browser
- C. Clipart; Excel
- D. Charts; Excel.

18. The _____ button can be used to create links from words and images to other slides.

- A. Animate
 - B. Transfer
 - C. Link it
 - D. Action.
-

19. Crop this image tightly around the monkey

20. Apply a 2-point thick solid brown border and a drop shadow to this photo.

DAY #3

HOW TO CREATE A NEW PRESENTATION?

1. Click on the File tab.
2. Choose New (See Figure 30).
3. Double-click on Blank presentation (See Figure 30).

4. A new blank presentation will be created

Figure 30 - Creating a New Presentation

Saving a Presentation

You created a new presentation. Now, you should save the presentation so that you can use it later.

The Save command, available from the File tab, is used to save a newly created presentation or to save the changes made to an existing presentation.

When saving a file for the first time, you are prompted to enter a file name for the presentation, and you are asked in which location you would like the file to be saved.

FILE FORMATS

PowerPoint uses PowerPoint Presentation (.pptx) as the default file format. Additional formats include PowerPoint 97-2003 (.ppt), PowerPoint Show (.ppsx), PowerPoint Show 97-2003 (.pps), Windows Media Video (.wmv), as well as GIF, JPEG, PNG, TIF and BMP.

The PowerPoint Show is a presentation that always opens in Slide Show view rather than in Normal view.

How to Save a Presentation

1. Click the **File** tab.
2. Choose **Save As** to save the presentation with a new name in (See Figure 31).
3. Select **Computer** to save to the local drive (computer/laptop etc.) (See Figure 31).
4. Select your desired **folder** (See Figure 31).
5. In the File Name text box, type the name of the file (See Figure 32).
6. Click **Save as Type** and then do one of the following (See Figure 32):

- i. For a presentation that can be opened only in PowerPoint 2016 or in PowerPoint 2013, in the Save as Type list, select **PowerPoint Presentation** (*.pptx).

- ii. For a presentation that can be opened in either PowerPoint 2016 or earlier versions of PowerPoint, select **PowerPoint 97-2003 Presentation** (*.ppt).

7. Click **Save** (See Figure 32).

Note: You can also press CTRL+S or click **Save** near the top of the screen to save your presentation quickly at any time.

Figure 101 - Save As

Figure 32 - File Name and Save as Type

APPEARANCE

Slides

You are familiar with creating a new presentation and saving the changes you make to an existing presentation. You may need to add slides to the presentation to include more information.

Before you begin creating a presentation it is important that you decide on a design and layout. Slides and layouts are the basic building blocks of any presentation. For a presentation to be effective, care should be taken to apply the right slide layouts.

Being able to add the appropriate slide layout to your presentation will enable you to present information more relevantly to your audience. PowerPoint offers several built-in slide layouts to deliver visually effective presentations.

Adding a New Slide

1. Within the slides pane, select the slide that you would like to insert a new slide after.
2. On the Home tab in the ribbon, click the drop-down arrow next to New Slide, within the Slides group, to display the default list of layouts (See Figure 33).
3. From the New Slide drop-down list, select a layout to insert (See Figure 33).

Figure 33 - New Slide

TYPES OF SLIDE LAYOUTS

Title Slide	This layout includes placeholders for a main title and a subtitle.
Title And Content	This layout includes a placeholder to enter slide title and a place for text, charts, tables, pictures, clip art, and SmartArt graphic
Section Header	This layout allows space for section and sub-section titles.
Two Content	Much like the Title and Content slide layout, this layout offers a place for slide title text and two content places for text, charts, tables, pictures, clip art, and SmartArt graphics.
Comparison	This layout is just like the Two Content layout with the addition of two text placeholders to aid in compare and contrast slides.
Title Only	This layout offers a place to enter title text.
Blank	This is a blank slide with no placeholders.
Content with Caption	With this slide you can enter a title, text, and content such as additional text, charts, tables, pictures, clip art, and SmartArt graphics.
Picture with Caption	This layout offers a place for a picture and caption text.

Table 2 - Slide Layouts

EXERCISE

1. Which parts of your Presentation go at the beginning of the show?
 - A. Title & Teaser
 - B. Recap & Sources
 - C. Contents & Summary
 - D. Teaser & Recap.

Note:

Teaser in PowerPoint

A teaser is a slide or presentation segment placed at the beginning of a presentation or section to generate curiosity and provide a brief glimpse of the main content or a key revelation to come. It functions like a movie trailer or a problem statement, piquing the audience's interest and setting the context without giving away all the details immediately.

- **Purpose:** To grab the audience's attention, create anticipation, and provide a "hook" that makes them want to listen to the rest of the presentation.
- **Usage:** Often used in storytelling structures where you start with an exciting result or problem and then explain the journey that led there. It can also be a single-page document (a "one-pager") used in business contexts to attract investment or interest.

Recap in PowerPoint

A recap (or summary/conclusion slide) is a slide or set of slides, typically placed at the end of a presentation or after a significant section, that summarizes the main points and critical takeaways that have already been discussed.

- **Purpose:** To reinforce learning, ensure the audience grasps the core messages, consolidate complex information, and facilitate a smooth transition to Q&A or next steps.
- **Usage:** The recap slide generally highlights the top 3-5 crucial points, often using bullet points or visual cues. PowerPoint offers features like Summary Zoom which can automatically create a summary slide from selected slides to help with this.

In short, a teaser looks forward to generate interest in what is coming, while a recap looks backward to consolidate what has been presented.

2. This Slide presents whatever is most exciting about the topic. It makes listeners want to know more:

- A. Teaser Slide.
 - B. Content Slide
 - C. Recap Slide
 - D. Sources Slide
-

3. This slide tells where the presenter got the information and pictures he/she used. It names people consulted, websites reviewed, and so forth.

- A. Sources Slide.
 - B. Summary Slide
 - C. Contents Slide
 - D. Recap Slide
-

4. This slide answers the question, *"What was that again?"* It reminds listeners what you told them about each thing you promised to cover.
-
- A. Recap Slide.
 - B. Title Slide
 - C. Teaser Slide
 - D. Contents Slide
-
5. Adding one or more pictures is a good idea on:
-
- A. All slides. Every slide is better with a good picture.
 - B. All slides except the Title slide (since there is no room for a picture)
 - C. The Content Slides only. Otherwise pictures just distract from the point.
 - D. All slides except the Recap and Sources slides.
-
6. This Slide tells the topic of the presentation and who the presenter is:
-
- A. Title Slide.
 - B. Summary Slide
 - C. Recap Slide
 - D. Sources Slide
-
7. Which parts of your Presentation go at the end of the show?
-
- A. Recap & Sources.
 - B. Title & Teaser
 - C. Summary & Contents
 - D. Recap & Teaser
-
8. Which main slide determines the organization of both the Content Slides and the Recap Slide?
-
- A. Summary Slide.
 - B. Teaser Slide
 - C. Title Slide
 - D. Sources Slide
-

9. These slides include several whose titles exactly match bullets in the Summary Slide. They form the main body of the presentation.

- A. Content Slides.
 - B. Recap Slides
 - C. Source Slides
 - D. Teaser Slides
-

10. This Slide mentions every topic in the whole presentation in 3 or 4 bullet points. It's like a *"Table of Contents"* for the show.

- A. Summary Slide.
 - B. Content Slide
 - C. Title Slide
 - D. Sources Slide
-

11. How many slides can you add to a PowerPoint Presentation?

- A. Limited
 - B. Unlimited.
-

12. Can you customize your Quick Access Toolbar?

- A. Yes.
 - B. No
-

13. You cannot customize the Ribbon or Tabs.

- A. True
 - B. False.
-

14. What features in PowerPoint did you also see in Word? Select all that apply.

- A. Quick Access Toolbar
 - B. The Ribbon
 - C. Zoom Controls
 - D. The Clipboard
 - E. Opening and Saving Files
-

F. All of the above.

15. What view allows you to see all the slides but does not show the slide and outline tabs?

- A. Normal View
 - B. Slide Sorter View.
 - C. Reading View
 - D. Presentation View
-

16. Which of the following are slide layouts?

- A. Title Slide
 - B. Blank Slide
 - C. Multimedia Slide
 - D. All of the above.
-

17. Follow the instructions below:

- i. Start Microsoft PowerPoint presentation
 - ii. Start a new blank presentation
 - iii. Your first Slide is going to be a Title Slide
 - iv. Write the Text as in the preview: **Jolis International Ltd**
 - v. Make the Font of “**Jolis**” Arial Black and size 88
 - vi. Insert a second slide this should be with a layout of Bulleted List
 - vii. Write the Text as in preview below
-

- a. [Title]: **Jolis International Ltd**
 - b. [Body]:
-

- i. **Mission Statement**
 - ii. **Company Objectives**
 - iii. **Management Team**
 - iv. **Employees**
 - v. **Sales**
-

- viii. Make the Font Color of the Points to Green
- ix. Insert a third slide this should be an Organization Chart. Include the following people in the chart:
- a. Abishai Abdi, General Manager
 - b. Asahel Abdi, Head of Sales
 - c. Abishag Abdi, Assistant to the General Manager
 - d. Abdi McDad, Human Resources Manager

- x. Add a fourth slide this should be a Table Chart. The chart should look like the following:

<i>New Products</i>	<i>Discontinued Products</i>
Digital Cameras	8mm Cameras
Ultra Slim Video Camera	8x Zoom Video Camera
25" Plasma TVs	21" Black and White TVs
DVD Recorders	Video Players
7.1 Dolby Surround Systems	2 channel stereo systems

- xi. Make the titles *New Products* and *Discontinued Products* with a shadow effect and centered in the cell. Widen columns to fit Text as above.
- xii. The Fifth slide should be a Chart slide. The chart should be a bar chart, and include the following data must be used to form the chart:

	January	February	March	April
TVs	20	27	90	75
DVDs	30	38	34	31
Hifi equipment	45	46	45	43
Video Recorders	25	29	15	40

- xiii. Change the colors of the chart so that the series of bars are red, yellow, pink, and green.
- xiv. Add a light colored background to all slides in the presentation.
- xv. Add also Transition effects between each slides and also different effects for all text and pictures in the presentation.
- xvi. Reverse the order of the second and third slides
- xvii. Save the presentation as Jolis International Ltd.

DAY #4

TEXT

IGNITING OPPORTUNITIES

JOLIS ACADEMY

A presentation is not all about pictures and background color—it depends mostly on the text. The message of your presentation is conveyed through the text.

The visual aids are simply cosmetics to help support your message. The instructions below explain how to work with text.

Entering Text

Most slides contain one or more text placeholders. These placeholders are available for you to type text on the slide layout chosen. In order to add text to a slide, click in the **placeholder** and begin typing.

The placeholder is movable and you can position it anywhere on the slide. You can also resize a text placeholder by dragging the **sizing handles** (See Figure 34). Removing an unwanted text placeholder from a slide is as simple as selecting it and pressing Delete.

A text placeholder can contain multiple lines of text and will adjust the size of the text and the amount of space between the lines if the text exceeds the allowed space.

Figure 34 - Text Placeholders

Text Boxes can be added to any slide in order to provide additional room outside of the text placeholders.

Adding a Text Box

1. From the Insert tab, click on **Text Box**.

Figure 35 - Inserting a Text Box

2. Left-click on the **area of the slide** where you want to add text.
3. While maintaining the left-click, drag the **mouse cursor** down a bit and then to the right, then release. The *dashed text box* appears.
4. Left-click once inside the **text box** and start entering your text (See Figure 36).

Figure 36 - Text Entry in a New Textbox

Formatting Text

When creating a presentation, it is likely that you will be doing some formatting. In order to edit text on a presentation:

1. Select the **text** (by left-clicking and maintaining the left-click while dragging the mouse cursor across the text).
2. Use the Font Group on the Home tab or right-click on the **selected text** and choose formatting options from the Mini Toolbar (See Figure 37).
3. Make necessary changes to the font and click **outside** of the text placeholder to accept the changes.

Figure 37 - Formatting Text

GRAPHICS

Another way to add emphasis to your presentation is to have visual aids or graphics. Although we learned earlier that the most important part of your presentation is the message, it is always helpful to use graphics to get your point across more concisely and in a shorter period of time.

Inserting Pictures

When inserting clip art onto a preselected slide layout:

1. Go to the **Insert** tab.
2. Type in your **key word** or **phrase** of the object you are looking for into the search box.
3. This will open the Insert Pictures window.

Figure 38 - Search for Clipart

4. Scroll through the given results to find your desired clip art (See Figure 39).
5. Once found, click on the **image** (See Figure 39).
6. Select **Insert** to add the clip art to your slide (See Figure 39).

Figure 39 - Insert Clip Art

Images from a File

Images from your own collection and experiences may also add value to your presentation. You must have the image saved prior to adding it to your presentation.

Inserting an Image from a file

Place your cursor where you would like the image to appear. Select the Insert Tab. Click Pictures (See Figure 40). In the Insert Picture dialog box, navigate to find your image. Select your image, and click **Insert**.

Figure 40 - Insert Pictures

DRAW SHAPES

Shapes are simple geometric objects that are pre-created by PowerPoint and can be modified. A shape can contain text or can appear without it. It can also be filled with color, and the outline of the shape can be given a different style and color.

Inserting a Shape

1. Select the **Insert** Tab.
2. Click **Shapes**.

3. Select the **shape** you wish to draw
4. Your cursor becomes a small black plus sign.
5. In the Slide pane, point the crosshair mouse pointer to the upper-left corner of the area where you want to draw the shape, hold the left mouse button down, and then drag diagonally down to the right to create the shape.

Altering a Shape

1. You can now move your shape if necessary by clicking on the object, holding down the left mouse button, and dragging it to another location.
2. You may also alter the look of your shape by selecting the shape and clicking the Format tab (See Figure 42).
3. In the Shape Styles group, scroll through additional styles and click on the desired style to apply it to the shape (See Figure 42).

Figure 41 - Insert Shapes

Figure 112 - Altering Shapes

HYPERLINKS

You may have an additional document or a great website to enhance your presentation. Adding hyperlinks into your presentation can allow you to quickly jump to supplemental information while you are presenting.

Adding a Hyperlink

1. Select the **text** that you would like to change to a hyperlink.
2. Select the **Insert tab** (See Figure 43).

3. Click **Hyperlink** (See Figure 43).

Figure 43 - Inserting a Hyperlink

4. The text you selected will appear in the Text to Display field at the top of the window (See Figure 44). You can change the text if you would like.
5. Select the location where you want to link to from the Link to column on the left (See Figure 44).
6. Type the address that you want to link to in the Address field (See Figure 44).
7. Click OK (See Figure 44). The text that you selected will now hyperlink to the web address.

Note: You can also type the hyperlink out and press **enter**, and *PowerPoint* will automatically create the hyperlink.

HEADER AND FOOTER

Occasionally it is necessary to add information to the Header or Footer of a PowerPoint presentation such as but not limited to organization, class information, etc.

Adding a Header or Footer

1. Select the **Insert** tab.
2. Click **Header & Footer**.

Figure 45 - Inserting Header & Footer

3. Select whether you would like to add these settings to the Slides or Notes and Handouts by selecting the appropriate tab (See Figure 46).
4. Click inside the checkbox to add the **Date and Time** or **Slide Number** (See Figure 46).
5. If you would like this information to appear on all slides, click **Apply to All** (See Figure 46).

PRINTING

PowerPoint 2016 allows you to print your presentation in order to aid you in presenting or to give your audience something to take notes on.

There are multiple formats available when printing; you should choose a format which best suits your presentation and audience needs.

Figure 46 - Header and Footer Settings

Printing Your Presentation

From the Backstage view:

1. Click the **File** tab.
2. Click on **Print** to view the printer settings
3. Indicate the number of copies you would like to print
4. Select the printer

From the **Settings** section:

1. Click on **Print All Slides**. If you do not need to print all slides, you may select another option in the window (See Figure 48).
2. Click on **Full Page Slides** to access Print Layout options such as Handouts and Notes Pages (See Figure 49).

Note: If you select **Handouts**, choose the amount of slides that should appear on the printed page from the Handouts box.

The *3 Slides* option allows for notes to be written on the handout.

3. Click on **Print One Sided** to access options to print on both sides of the paper (See Figure 50).
4. Click on **Grayscale** to access options to print in grayscale, color, or black & white.
5. Once you are ready to print, click on the **Print**

Figure 48 - Print All Slides

EXERCISE

1. In creating a new slide, you choose a _____.

A. Layout.

B. Theme

C. View

D. Picture

2. The Apply Design Template command is used to _____.

A. Change the order of the slides

B. Change the shape of the slides

C. Change the background and fonts of the entire presentation.

D. Create a new, empty presentation

3. Graphics can be placed _____.

A. In a text box

B. Behind another graphic

C. Off the slide itself

D. All of the answers.

4. Which key do you press to go into Slide Show view and always start on the first slide?

A. ESC

B. F5.

C. F7

D. F9

5. To delete the slide currently displayed in the Slide Pane _____.

A. Select the Delete Slide command.

B. Press the Backspace key

C. Select the Removal command, type the slide number in the dialog box, and then select OK

D. Select the Exit command

6. In outline view you can:

A. Move slides

B. Edit slides

- C. Create a new slide
 - D. All of above.
-
7. To make one section of slides in your presentation, use a different design template from the other slides, what do you do?
-
- A. Select the slide thumbnails in that section, and apply a different color scheme
 - B. Select the slide thumbnails in that section, and apply a different design template.
 - C. Select one of the slides in the section you want to change, customize the fonts and colors, and use the
-
8. When you apply a design template to a presentation, it can be _____.
-
- A. Applied along with another template to the same slide
 - B. Applied to all slides.
 - C. Modified in slide show view
 - D. None of the above
-
9. On a single slide, you can have _____.
-
- A. Single video file
 - B. 2 video files.
 - C. 3 video files
 - D. All of the above
-
10. Using a custom animation effect, how do you make text appear on a slide letter by letter?
-
- A. Apply the animation scheme Fade in one by one
 - B. Apply an entrance effect, and then set it to By letter in the Effect Options dialog box.
 - C. Apply the Fly In entrance effect to the text, and then set its speed to Very Slow
-

Note:

To create a letter-by-letter text effect (like a typewriter) in PowerPoint, apply an **entrance animation** (like "Appear") to your text box, then open the **Animation Pane**, select the animation, go to **Effect Options**, choose "By letter" under "Animate text," and adjust the delay time between letters for speed control. You can add a typewriter sound effect in the same options for a more immersive experience.

11. PowerPoint has direct connections with which of the following from its toolbars or menu system?

- A. Microsoft Word
 - B. Internet Explorer
 - C. Your E-Mail program
 - D. All of the above.
-

12. The notes pane at the bottom of the PowerPoint window is the only place you can type and work with notes.

- A. True
 - B. False.
-

13. You can copy an object using _____.

- A. Right mouse button
 - B. Edit menu
 - C. Control/C
 - D. All of the above.
-

14. What's the best way to design the layout for your slides?

- A. Create layouts for slides, handouts, and notes using the Master Layout dialog box in slide master view.
 - B. For each new slide, select a layout from the Slide Layout task pane
 - C. Apply templates from the Slide Design task pane
-

15. To apply a design template to all your slides, you need to select all the slide thumbnails on the Slides tab before you apply the template.

- A. True
 - B. False.
-

16. Which of the following cannot be placed on a single slide?

- A. Two different color schemes
 - B. Organization Chart.
 - C. WordArt
-

D. Excel Spreadsheet

Explanation

An organization chart is a type of diagram that represents the structure of an organization, typically showing the hierarchy of different roles or positions within the company. It is usually a more complex element and is not typically placed on a single slide because it often requires multiple shapes and connectors to represent the various levels and reporting relationships within an organization. Other elements like two different color schemes, WordArt, and Excel spreadsheets can be placed on a single slide in a presentation.

17. What is the best way to design the layout for your slides?

- A. Create layouts for slides, handouts, and notes using the Master Layout dialog box in slide master view
 - B. For each new slide, select a layout from the Slide Layout task pane
 - C. Both A and B are valid.
-

18. You're giving your presentation, and you need to click to a slide that's a few slides back. How do you get there?

- A. Press ESC to get back into normal view; click the correct slide thumbnail in normal view; then click the Resume
 - B. Press BACKSPACE until you hit the slide you're looking for
 - C. Right-click, point to Go on the shortcut menu, point to By Title, and click the slide you want to go.
-

Explanation

To navigate to a specific slide during a presentation in Microsoft PowerPoint, you can press the ESC key to exit the slide show and return to normal view. Then, click on the correct slide thumbnail in normal view, and finally, click the "Resume Slide Show" button to continue your presentation from the selected slide. This allows you to go back and access a specific slide during your presentation.

19. When you first start PowerPoint:

- A. The screen is blank, you must choose a template
 - B. Outline view is visible
 - C. A title slide for a new presentation appears.
 - D. You must create a new presentation
-

Explanation

When you first start PowerPoint, a title slide for a new presentation appears. This means that the software automatically provides a default slide with a placeholder for the presentation title. This allows the user to quickly start creating their presentation by adding content to the title slide or selecting a different slide layout. The appearance of the title slide signifies that PowerPoint is ready for the user to begin creating their presentation.

20. Practical Exercise

- i. Load your Presentation Application and start a new presentation
 - ii. The first slide is a Title Slide. Select the appropriate layout and enter the title:
 - a. **Annual Food Fair.**
 - iii. Add the sub-title:
 - a. **A Celebration of Eating**
 - iv. Insert a small, red circle at the bottom right of the title slide.
 - v. Change the font color for the whole title and sub-title to **blue**, and apply a text shadow effect just to the words **Food** and **Fair**.
 - vi. Insert a second slide to the presentation, selecting a layout appropriate for a series of bullet points, and using the title: **The Menu**. Enter the following text:
 - a. **Chocolate Desserts**
 - b. **Cakes and Puddings**
 - c. **Roast Meals**
 - d. **Using Pasta Creatively**
 - vii. Change the line spacing for these bullet points to **1.5 lines**.
 - viii. Increase the font size for the words **The Menu** in the title.
 - ix. Add a footer with your name and the text: **Food Fair** so they both appear on every slide, and number all the slides. (Make sure the number is not obscured by the red circle on the title slide)
 - x. Insert a third slide, which is to be an **organization chart**. Use the title **Meet The Team**. Enter: **Maggie Peet, Manager** at the top of the chart, and show the following three as reporting to Maggie Peet: **Brian Webb. Bookings; Janine Newton, Publicity; Gregg Brown, Accounts**
 - xi. Embolden the text in the title of the third slide, and change the font to Arial.
-

- xii. Apply a light **colored background** to all the slides in the presentation
- xiii. On the third slide, insert an image suitable for the topic of food from an image library. Reduce the size of the image and place it where it will not interfere with text.
- xiv. Save the presentation as **foodfair**.
- xv. Print the presentation with three slides per page, and close the presentation.

DAY #5

TRANSITIONS & ANIMATIONS; TIMING THE PRESENTATION

Introduction

We will explain how to add transitions and animations to presentation slides. Text, graphics, diagrams, charts, shapes, and other objects placed on your slides can all be animated to draw attention, emphasize important points, control the flow of information, and add interest to the presentation during the slideshow.

You can rehearse your presentation to make sure that it fits within a certain time frame. We will also explain how to time your presentation to record the amount of time needed to present each slide.

These notes offer step-by-step instructions to creating dynamic presentations using transitions, animations, and timing.

Learning Objectives

After reading this, you should be able to:

1. Apply transitions
2. Change the properties of a transition
3. Create one or more animations to a slide
4. Reorder animations
5. Use the animation painter
6. Remove an animation
7. Use the animation pane
8. Time the presentation

TRANSITIONS

Transitions are used to control the pace of your presentation and create a better flow between slides. Rather than simply changing from one slide to the next, you can apply special effects to the slides as they transition.

The steps below explain how to apply transitions to your slides.

Adding a Slide Transition

1. Select the slide you wish to apply a transition to.
2. Select the Transitions tab (See Figure 1).
3. Select a **transition effect** from the Transitions to this Slide group (See Figure 1).
4. Select the **down-arrow** to view all of the available Transitions at once (See Figure 1).

Figure 1 - Apply Transitions

5. Once you select a transition type, click **Preview** to view the effect on the slide.

Figure 2 - Preview

6. If you would like the same transition for all slides in the presentation, click **Apply To All** in the *Timing* group.

Figure 3 - Apply To All

Changing the Properties of a Transition

Occasionally you may experience the transition speed is too fast or too slow. You may also want to add sound to a transition effect to enhance your presentation as well as control how the slide advances. In order to change these settings, follow the steps below:

1. Select the **Transitions** tab.
2. In the Timing group, click the **down-arrow** for Sound to add a sound effect for the transition (See Figure 4).

Figure 4 - Sound and Duration

3. Select the **up/down arrow** next to Duration to choose the amount of time the transition lasts. (See Figure 4).
4. Click the Preview button as shown in the Preview group as shown in Figure 2, to test your settings.
5. If you would like the same setting for all slides within the presentation, click Apply to All.
6. You can also set how the slide will advance; either by a mouse click or after a certain amount of time has elapsed.

Figure 12 - Advance Slide

Creating One or More Custom Animations

1. Click the **Animations** tab.
2. Click the object (i.e.: clipart, textbox, shape) you would like to animate to select it. Click the
3. **Add Animation** button.

Figure 13 - Add Animation

Select the animation from the drop-down list which offers four types of animation effects (See Figure 7):

- a. **Entrance:** Objects can enter the slide via any of the entrance effects, including Fly In, Dissolve In, Grow & Turn, Swish, and Crawl In (See Figure 7).

Note: If you do not apply an entrance effect, the animated object starts at the position where you placed it on the slide.

- b. **Emphasis:** This effect draws attention to an object that is already on the slide via any of the emphasis effects available, including Flash Bulb, Spin, Grow & Shrink, and Color Wave (See Figure 7).
- c. **Exit:** Objects can leave the slide via any of the exit effects such as Fly Out, Disappear, Spiral Out, and Sink Down (See Figure 7).
- d. **Motion Paths:** Objects can travel along a track which was created based on predefined motion paths such as Circle, Funnel, Stairs Down or Wave. The object could also travel along one of four drawn custom paths: Line, Curve, Freeform, and Scribble.

Note: To see a preview of the animation, select an animation and click the Preview button on the ribbon.

1. To view additional effects, select either More Entrance Effects, More Emphasis Effects, More Exit Effects, or More Motion Paths from the bottom of the Add Animations menu (See Figure 7).
2. Click the option of your choice to apply that animation effect to the selected object.
3. The Effect Options button may become available (Some effects such as Appear do not have any effect options).
4. Click the **Effect Options** button, and change the option if desired.

Figure 14

Note: The effect options will vary depending on which animation is chosen.

5. Apply the timing options for your animation effect.

By default, the animation will play upon a mouse click.

To make the animation play automatically when the slide loads, change the **Start** from *On Click* to *After Previous*.

You can specify the length of an animation by editing the duration.

Note: The longer the duration, the slower the effect.

You can set the animation to play after a certain number of seconds by specifying a delay.

Once the basic settings are in place, click the Preview button on the left side of the Animations ribbon to visualize the animation.

To create more than one animation for a given object, click the Add Animation button again and repeat steps 4 through 9.

Figure 9 - Timing Options

Figure 10 - Duration

Figure 11 - Delay

You can, for example, give an object an entrance effect, an emphasis effect, and an exit effect.

This would let you bring an object onscreen, draw attention to it, and then have it leave the screen.

Figure 12 - Preview

Reordering Animations

After applying a few animations to one or more objects on a slide, you may wish to change their order sequence.

1. Click the **object** that has the animations you wish to reorder.
2. Click the **number** to the left of the object that is representing the effect you wish to move.
3. At the right side of the ribbon, in the Reorder Animation group, click the button of your choice to **Move Earlier** or **Move Later**.
4. Upon making these adjustments, the animation order will change.

Figure 13 - Select

Figure 15 - Reorder Animation

The Animation Painter

The Animation Painter makes it easy to copy a complete animation effect from one object to another.

1. Click the **animated object**.
2. Click the **Animation Painter** button on the ribbon. A small paint brush will appear next to the cursor.
3. Click the **object** where you wish to apply the animation(s). The animations created for the first object are applied to the second object selected.

Figure 16 - Select Animated Object

Figure 17 - Animation Painter

Removing an Animation

1. Click the **object** that has an animation already applied and that you wish to remove.
2. Click the **number** to the left of the object that is representing the effect you wish to delete.

Figure 18 - Duplicated Animation Effects

3. Press the **Delete** key on the keyboard. This will delete the animation.

The Animation Pane

You may access additional and more advanced animation options such as timeline, sound, and timing by enabling the animation pane.

1. From the Animations tab, click the **Animation Pane** button on the ribbon.
2. In the list in the Animation Pane, click the animation to be adjusted to select it.
3. Click the small drop-down arrow to the right of the selected animation.
4. Select **Effect Options**.
5. Under the *Enhancements* section, you can add **sound** and set the object to **not dim** after the animation.
6. Click the **Timing** tab. From the Timing tab, you may set the animation to repeat and/or rewind when done playing. The Speed setting can be adjusted as well. Some effects have an additional property setting that allows you to control the range of an object (See Figure 24).
7. Click **OK** (See Figure 24).
8. Click the **Play From** button on top of the Animation Pane to see your animation(s) in action.

Figure 19 - Select Effect to be adjusted

Figure 20 - Animation Pane Button

Figure 24 - Timing Tab

Note: Click the **X** in the upper right corner of the Animation Pane, to close it.

Timing the Presentation

A good way to determine how long it will actually take you to do the presentation is to use the Rehearse Timing tool.

Figure 26 - Rehearse Timings

1. On the Slide Show tab, in the Set Up group, click Rehearse Timings. The Rehearsal toolbar

2. Appears and the Slide Time box begins timing the presentation.

The Rehearsal Toolbar

- Next (advance to next slide)
- Pause
- Slide Time
- Repeat
- Total presentation time

Figure 27 - Rehearsal Toolbar

3. While timing your presentation, do one or more of the following on the Rehearsal toolbar:

- To move to the next slide, click **Next** (See Figure 27).
 - To temporarily stop recording the time, click **Pause** (See Figure 27).
 - To restart recording, click the **Resume Recording** button in the window that appears (See Figure 28).
 - To set an exact length of time for a slide to appear, type the length of time in the Slide Time box.
 - To restart the recording time for the current slide, click **Repeat**.
4. After you set the time for the last slide, a message box displays the total time for the presentation and prompts you to do one of the following:
- To keep the recorded slide timings, click **Yes**. To discard the recorded slide timings, click **No**.

Figure 28 - Resume Recording

5. Slide Sorter view appears and displays the time of each slide in your presentation.

Advancing Slides Automatically

You can set your slides to advance automatically so that you will not have to advance them manually.

- i. Select the slide that you would like to apply a timing for.
- ii. Select the Transitions tab on the ribbon.
- iii. Within the Timing group, go to the Advance Slide section.

Figure 29 - Advance Slide

- iv. Insert a check next to After, and then enter the amount of time that you would like to display the slide.
- v. Select another slide and repeat the process.

EXERCISE

1. In the PowerPoint window, what's the main area for adding slide content?

- A. The Slides tab, on the left of the window
- B. The notes pane
- C. The slide pane, in the middle of the window.

Explanation

The main area for adding slide content in the PowerPoint window is the slide pane, which is located in the middle of the window. This is where users can create and edit individual slides by adding text, images, shapes, and other content elements. The slide pane provides a visual representation of the slide layout and allows users to easily manipulate and arrange slide elements.

2. You've customized a design template in one presentation and you want to use it in another presentation. What's the best way to do this?

- A. Use the Browse feature in the Slide Design task pane to find the file that has your design template and
- B. Copy and paste the slide with the design template you want into the new presentation; inserted slides will inherit the.
- C. Save the presentation that has the design template with a new name, and then use the new file for your

3. You've put a layout on your slide that contains a placeholder for a picture. But you'd rather use the Clip Art task pane to insert the art than the options you get when you click the Insert Clip Art icon in the placeholder. What do you do?

- A. Apply a Blank layout instead, and then use the Insert menu (point to Picture, and then click Clip Art) to.
- B. Select the placeholder on the slide, and then press DELETE. Then use the Insert menu (point to Picture, and then
- C. Make sure the picture placeholder is selected, and then use the Insert menu (point to Picture, and then click Clip

Explanation

To use the Clip Art task pane to insert an image when you've applied a layout with a picture placeholder, it's best to apply a Blank layout instead. This way, you can use the Insert menu to open the Clip Art task pane and insert the picture. To use the Clip Art task pane to insert an image when you've applied a layout with a picture placeholder, it's best to apply a Blank layout instead. This way, you can use the Insert menu to open the Clip Art task pane and insert the picture.

4. To place an organization chart on a slide, you must _____.

- A. Save the presentation.
- B. Update the presentation
- C. Close the file
- D. None of the above

Explanation

Before you can insert an organization chart on a slide in PowerPoint, it's generally a good practice to save your presentation to ensure that any changes or additions are saved and that the organization chart will be part of the saved file. This helps you maintain your work and ensures that the organization chart is included in the presentation.

Option B ("update the presentation") doesn't typically apply to inserting an organization chart on a slide. Saving the presentation (Option A) is a common step to make sure your work is saved, but updating the presentation or closing the file (Options B and C) aren't necessary just to place an organization chart on a slide. However, the specific context or requirements of your presentation may vary.

5. To move a text placeholder, you:

- A. Click and drag on the center of the placeholder.
- B. Click and drag on a handle on the placeholder
- C. Click and drag on the placeholder's hashed border
- D. Double click on the center and then drag

Explanation

To move a text placeholder in PowerPoint, you can click and drag from the center of the placeholder to reposition it within the slide. This action allows you to easily rearrange placeholders to customize the layout of your slides. To move a text placeholder in PowerPoint, you can click and drag from the center of the placeholder to reposition it within the slide. This action allows you to easily rearrange placeholders to customize the layout of your slides.

6. To print a presentation using shortcut keys, press ____.

A. ALT+TAB

B. CTRL+P.

C. ALT+P

D. TAB+P

7. A slide that consists of more than one level of bulleted text is called a ____ bulleted list slide.

A. Extra-level

B. Many-level

C. Multi-level.

D. Super-level

Explanation

A slide that consists of more than one level of bulleted text is called a multi-level bulleted list slide. This type of slide allows for hierarchically organized information, with different levels of indentation representing different levels of importance or subtopics. It helps to present complex information in a structured and easily understandable way.

8. A symbol such as a heavy dot or another character that precedes text in a presentation is called a(n) ____.

A. Asterisk

B. Bullet.

C. List

D. Text slide

9. The best way to get a slide show to stop is to:

A. Click STOP button

B. Exit PowerPoint

C. Press ESC.

D. Tell the computer to STOP

10. A(n) ____ is the basic unit of a PowerPoint presentation.

A. Object

B. Placeholder

C. Slide.

D. Task pane

11. It is a collection of electronic slides that can have text, pictures, graphics, tables, sound, and video. This collection can run automatically or can be controlled by a presenter.

A. Controlled presentation

B. Effective presentation

C. Oral Presentation

D. PowerPoint presentation.

12. To maintain balance and simplicity in your presentation, designers recommend using a maximum of ____ fonts and two font styles or effects.

A. Two.

B. Four

C. Five

D. Seven

13. To start PowerPoint, click the Start button on the Windows taskbar, point to Programs, and then select ____.

A. Accessories

B. Microsoft Office Tools

C. Microsoft PowerPoint.

D. Start PowerPoint

14. These are effects that are in place when you switch from one slide to the next.

A. Animations

B. Designs

C. Effects

D. Transitions.

15. You will use ____ when making a presentation.

- A. PowerPoint viewer
 - B. Scroll bars
 - C. Slide show view.
 - D. Voice commands
-

16. To start a slide show using the keyboard, press ____.

- A. CTRL+S
 - B. CTRL+ENTER
 - C. F4
 - D. F5.
-

17. These are design templates that can be applied to an entire presentation that, allows for consistency throughout the presentation.

- A. Designs
 - B. Styles
 - C. Themes.
 - D. Templates
-

Explanation

Themes are design templates that can be applied to an entire presentation, ensuring consistency in the design elements throughout. They provide a cohesive look and feel to the presentation by defining fonts, colors, backgrounds, and other visual elements. By using themes, presenters can easily apply a consistent design to all slides, saving time and effort in formatting each slide individually.

18. A separate window within the application that provides a list of commonly used commands is called a ____.

- A. Common commands pane
 - B. Move handle
 - C. Task pane.
 - D. Viewer
-

19. To access the PowerPoint Help system using the keyboard, press ____.

- A. ALT+TAB
-

- B. CTRL+H
- C. ESC
- D. F1.

20. The ____ rule states that each slide should have ample space to rest the eyes.

- A. Rule of Thirds.
- B. Rule of Thumb
- C. Rule of Thunder
- D. Rule of Thor

Explanation

The Rule of Thirds states that each slide should have ample space to rest the eyes. This rule, a principle in photography and design, suggests dividing an image into nine equal parts using two horizontal and two vertical lines. The four points where the lines intersect are considered to be the most visually appealing areas to place the main elements of the composition. This rule helps create balance and visual interest in the image by avoiding placing the subject in the center and instead allowing ample space for the eyes to rest.

21. Underline, shadow, emboss, superscript, and subscript are all examples of text ____.

- A. Colors
- B. Effects.
- C. Fonts
- D. Styles

Explanation

Underline, shadow, emboss, superscript, and subscript are all examples of text effects. These are formatting options that can be applied to text to enhance its appearance or convey a specific meaning. Text effects are used to make the text stand out, add emphasis, or give it a three-dimensional look.

22. When you drag the scroll box, the ____ displays the number and title of the slide you are about to display.

- A. Next slide button
- B. Status bar
- C. Slide indicator.
- D. Zoom box arrow

Explanation

When you drag the scroll box, the slide indicator displays the number and title of the slide you are about to display. This allows you to easily keep track of the slide you are currently on and the slide you are about to navigate to. The slide indicator is a helpful tool for quickly navigating through a presentation and ensuring that you are on the correct slide.

23. It is a collection of data and information that is to be delivered to a specific audience.

- A. A presentation.
- B. Effective presentation
- C. PowerPoint presentation
- D. Slideshow presentation

Explanation

A presentation is a method of delivering data and information to a specific audience. It typically involves using visual aids, such as slides or a slideshow, to convey the information effectively. This can be done through various tools, including PowerPoint. The purpose of a presentation is to engage and inform the audience, making it an effective way to share information in a structured and organized manner.

24. A ___ ends all slide shows unless the option setting is deselected.

- A. Blue slide
- B. Black slide.
- C. Blank slide
- D. Closing slide

Explanation

A black slide is used to end all slide shows unless the option setting is deselected. This means that when a black slide appears, it indicates that the slide show has reached its end. If the option setting is not deselected, the black slide will automatically be displayed as the final slide.

25. Practical Exercise

- i. Load your Presentation Application and start a new presentation
- ii. The first slide is a Title Only Slide. Select the appropriate layout and enter the title:
 - a. **Cook Family Cruises.**
- iii. Add a small blue rectangle at the top left of this slide.

- iv. Change the font color for the whole title to red, and apply a text shadow effect just to the word **Cruises**.
- v. Insert a second slide to the presentation, selecting a layout appropriate for a series of bullet points, and using the title: **Our Itinerary**. Enter the following text:

 - a. Canary Islands
 - b. Mediterranean
 - c. Greek Islandsx

- vi. Change the line spacing for these bullet points to **2 lines**. Increase the font size of the word **Itinerary** in the title. Add a footer with your name and the text: **Cruise Information** so they both appear on every slide, and number all the slides.
- vii. Insert a third slide, which is to be a graph. Use the title **Our Market Share**. Use the following data to produce a pie chart: **Cook 54%; Jackson 28%; Wilson 12%; Bennett 5%**
- viii. Embolden the text in the title of the third slide, and change the font to Arial.
- ix. Apply a different background to each slide in the presentation
- x. On the third slide, insert an image suitable for the topic of holidays from an image library. Reduce the size of the image and place it where it will not interfere with text.
- xi. Add a 4th slide containing nothing but the text: **Travel with us for less!!**
- xii. Save the presentation as **holidays**.
- xiii. Print the presentation with 4 slides per page, and close the presentation.

DAY #6

AUDIO

In PowerPoint, you can add audio to your presentation from clipart audio, from a file, or you can record audio. The instructions below explain how to add audio to your slide show using each of these methods.

To Insert Audio from a File

1. In Normal view, navigate to the slide that you want to add audio.

- Click the Insert tab on the Ribbon, and then click the Audio button.

Figure 1 - Ribbon

- From the drop-down list, within the Media group, select Audio on My PC.
- The *Insert Audio* window will appear. Navigate to the location of the audio file.
- Select the audio file, and then click the Insert button.
- The audio file will appear on the slide.

Figure 2 - Audio on My PC

To Record Audio

- In Normal view, navigate to the slide that you want to add audio.
- Click the Insert tab on the Ribbon, and then select Audio.

Figure 3 - Insert Audio

Figure 4 - Ribbon

- From the drop-down list, within the Media group, select **Record Audio**.
- The Recorder will appear. Type a **name** for the recording in the Name field.
- Click the **Record** button to start the recording.
- To preview your recording, click the **Play** button.

Figure 5 - Record Audio

Note: If you do not like the recording and want to re-record the audio, select the **Record** button again.

Figure 6 - Name the Recording

7. Once you are done, click **OK**. The audio file should appear on the slide.
8. If you do not want to keep the recording, click the **Cancel** button.

The Audio File

- **Play/Pause** – Click the play button to play/pause button to play and pause the audio file (See Figure 10).
- **Timeline** – The timeline will advance as the audio plays. Click anywhere on the timeline to go to a different place in the audio file (See Figure 10).
- **Back** – Move back .25 seconds in the audio file (See Figure 10).
- **Forward** – Move forward .25 seconds in the file (See Figure 10).
- **Timer** – View the time for the audio file (See Figure 10).
- **Volume** – Using your mouse, hover over the volume icon to access the slider. Scroll up to increase the volume. Scroll down to decrease the volume. Click the volume icon to Mute/Unmute the audio file (See Figure 10).

Figure 10 - Audio File

Deleting an Audio File

1. Navigate to the slide that contains the audio that you would like to delete.
2. Select the **audio file** icon.
3. Press the **Delete** or **Backspace** key on your keyboard.

Moving an Audio File

1. Navigate to the **slide** that contains the audio that you would like to move.
2. Click and drag the **audio file** to the desired location.

Playing Background Music Across all Slides

1. Select the **audio file** to be played across all slides.
2. On the *Audio Tools* contextual tab, select the **Playback** tab.

- Click the **Play in Background** button. The audio file will now play across all slides until you reach the end of the presentation.

Figure 11 - Play in Background

Editing Audio

Sometimes you may need to make changes to your audio file. The following instructions explain how to edit the audio file.

To Trim an Audio File:

- Select the audio file that you want to edit.
- Click the **Playback** tab on the Ribbon.
- Select **Trim Audio**.

Figure 12 - Trim Audio

- The Trim Audio window will appear. Click and drag the green handle to set the start time (See Figure 13).
- Click and drag the red handle to set the end time (See Figure 13).
- Click the **Play** button to preview the changes (See Figure 13).
- If necessary, adjust the handles again. Once you are done, click **OK** (See Figure 13).

Figure 13 - Trim Audio

Note: You can also adjust the start or end time by selecting the green or red handles, and then clicking the **Previous Frame** or **Next Frame** buttons.

Figure 15 - Fade In/Fade Out

To add a Fade In and Fade Out:

1. Select the audio file that you would like to edit.
2. Click the Playback tab on the Ribbon.
3. Under the Fade Duration section, either type in the desired times for the **Fade in** and **Fade Out**, or use the up and down arrows to adjust the times (See Figure 15).

Audio Options

Additional options that control how your audio file will play are found on the Playback tab, in the Audio Options group.

Figure 16 - Audio Options

1. **Volume** – Adjust the volume for the audio file (See Figure 16).
2. **Start** – Controls whether the audio file starts when you click the mouse, or automatically (See Figure 16).
3. **Play Across Slide** – Select the checkbox to play the audio file across all slides (See Figure 16).
4. **Loop until Stopped** – Select the checkbox to replay the audio file until stopped (See Figure 16Error! Reference source not found.).
5. **Hide During Show** – Select the checkbox to hide the audio file icon while the slide show is playing (See Figure 16).
6. **Rewind after Playing** – Select this checkbox to return the audio file to the beginning when it is finished playing (See Figure 16).

Applying an Audio Style

Once an audio file has been added to your slide, you can format it to make it look more presentable.

1. Select the audio file that you would like to format.
2. Select the Format tab (See Figure 17).
3. Hover over the picture styles for a preview of each one (See Figure 17).
4. Click the style of your choice. The style will be applied to the audio file. (See Figure 17).

Figure 17 - Picture Styles

EXERCISE

1. The Insert Tab would be used to add an object such as a picture, clip art or shapes

- A. True.
- B. False
-
2. The zoom slider is a slider on the status bar that changes the magnification level of the slide in the window.
-
- A. True.
- B. False
-
3. A notes pane is located in the middle of the screen and is used to add speaker notes.
-
- A. True
- B. False.
-
4. If you want to add an object such as a picture, clip art, shape, or header and footer, which tab of the ribbon should you use?
-
- A. Home Tab
- B. Insert Tab.
- C. Design Tab
- D. Animations Tab
- E. Slide Show Tab
-
5. The ribbon for Microsoft Word is exactly the same as the Microsoft PowerPoint ribbon.
-
- A. True
- B. False.
-

Explanation

The statement is false because the ribbon for Microsoft Word is not exactly the same as the Microsoft PowerPoint ribbon. While both programs have a ribbon interface, they have different tabs, commands, and options tailored to the specific features and functionalities of each program. The ribbon in Microsoft Word is designed for word processing tasks, such as formatting text, creating tables, and managing documents, while the ribbon in Microsoft PowerPoint is focused on creating and editing presentations, including features like slide layouts, animations, and transitions.

6. Look at the Home Tab. In which group of commands can you add new slides?
-
- A. Format
- B. Clipboard
-

C. Paragraph

D. Slides.

7. Which tab would you select to find the spelling command?

A. Animations Tab

B. Design Tab

C. Home Tab

D. Insert Tab

E. Review Tab.

8. Click the View tab. What group has the command Slide Master?

A. Presentation Views.

B. Show/Hide

C. Zoom

D. Color Gray Scale

E. Window

Explanation

The command Slide Master can be found in the Presentation Views group.

9. A set of three controls at the top right corner of a program window used to minimize, maximize/restore, or close the program window.

A. Window Controls.

B. Microsoft Office Controls

C. Microsoft Controls

D. PowerPoint Controls

10. The three parts of the ribbon are tabs, groups and commands.

A. True.

B. False

11. The Spelling Command can be found by selecting the Grammar Tab.

A. True

B. False.

12. A band that contains a set of tabs including Homes, Insert, Animations, Slide Show, Review, View and Add-Ins.

- A. Quick Access Toolbar
 - B. Office Button
 - C. Zoom Slider
 - D. Window Controls
 - E. Ribbon.
-

13. Look at the home tab. What group has the command layout?

- A. Format Group
 - B. Font Group
 - C. Slides Group.
 - D. Page Setup Group
 - E. Animations Group
-

14. A bar at the bottom right of the PowerPoint window that is used to switch between Normal View, Slide Sorter View and Slide Show View

- A. Views.
 - B. Windows
 - C. Slide master
 - D. Microsoft Office Manager
-

15. Look at the home tab. In which group of commands can you change the alignment of text?

- A. Clipboard
 - B. Slides
 - C. Font
 - D. Paragraph.
 - E. Text
-

Explanation

In the home tab, the group of commands that allows you to change the alignment of text is the "paragraph" group. This group includes options such as aligning text to the left, center, right, or justified. By selecting the desired alignment option from the paragraph group, you can easily change the alignment of text in your document or presentation.

16. The Format Group of commands allows you to change the format of text, such as selecting the font, size, bold, italic or underline styles.

- A. True
 - B. False.
-

17. What happens when the zoom slider is dragged to the left?

- A. The slide gets smaller
 - B. The zoom level gets smaller
 - C. The zoom level gets bigger
 - D. The slide and the zoom level both get bigger.
 - E. The slide and zoom level both get smaller
-

Explanation

When the zoom slider is dragged to the left, both the slide and the zoom level get smaller. This means that the visual content on the slide appears smaller and more zoomed out, allowing more content to be visible on the screen at once.

18. What happens when the zoom slider is dragged to the right?

- A. The slide gets bigger.
 - B. The zoom level gets smaller.
 - C. The zoom level gets bigger
 - D. The slide and the zoom level both get bigger.
 - E. The slide and the zoom level both get smaller.
-

19. Create a slide with the below bullet points and apply animation them. Each click should bring in one point.

- Bullet point
 - Bullet point
 - Bullet point
-

- Bullet point

20. For this exercise, you will create a PowerPoint presentation. The topic of your presentation will be: **"My Dream Job."** Do Internet research and obtain information about your career. What type of work would you do? What knowledge and skills are necessary to do the job well? How much does it pay? Where will you work? What appeals to you about this job? You will need to apply your creative and research skills on this assignment.

- Create a minimum of 10 slides with a slide theme appropriate for the topic.
- Utilize WordArt on your title slide for the title.
- In the notes section on your title slide, type in the seven (7) "Plan Ahead" decisions to make when creating your presentation as found on page PPT 48.
- Limit the amount of text per slide to approximately 6 lines with 6 words or less per line.
- Apply a slide color scheme appropriate to your theme.
- Use at least two different slide layouts
- Insert clip art or photo to each slide.
- Apply a different picture style or picture effect to each picture in your presentation.
- Select a transition and apply it to all slides.
- Insert a header on notes/handouts that includes your name and also insert a date\time that updates automatically.
- Insert a footer on slides with your name and slide numbers.
- On one slide include a table of potential salaries gathered from your research.
- Apply the same bullets and/or numbering on all slides that require them.
- Apply appropriate animation to at least 2 slides.
- On two slides insert appropriate shapes with text. These will count as clip art as noted in requirement f.
- On one slide insert an audio file from the following web site: <http://brainybetty.com/soundsforpowerpoint.htm> Download an appropriate file to your computer folder. Set the audio to automatically play when the slide is shown.
- Provide a bibliography in MLA format of all sources on the last slide of your presentation.

- r) Ensure error-free text.
- s) Include a screen shot of all websites that you used for research. Paste these into a separate PowerPoint file. One web site per slide. (These are in addition to the slides required.)

DAY #7

VIDEO

PowerPoint allows you to insert a video on to a slide and play it during your presentation. You can edit the video within PowerPoint using the trim feature, and the fade in/fade out feature. You can also format the appearance of the video.

Inserting a Video from a File

1. Navigate to the **slide** where you want to insert a video.
2. Select the **Insert** tab.
3. Click the **Video drop-down arrow**.

Figure 18 - Insert Video

4. Select Video on My PC.
5. Locate the video file, and then click Insert.
6. The video will be added to the slide. Click and drag the **sizing handles** to resize the video.

Figure 21 - Sizing Handles

Inserting an Online Video

If you choose to inserting an online video, you have the choice to select a video from YouTube or you can insert an embed code.

Previewing a Video

Click the video to select it.

1. **Play/Pause** – Click the Play/Pause button to preview the video (See Figure 22).
2. **Timeline** – To go directly to a specific part of the video, click anywhere on the timeline (See Figure 22).

3. **Back** – Move back .25 seconds (See Figure 22).
4. **Forward** – Move forward .25 seconds (See Figure 22).
5. **Volume** – Using your mouse, hover over the volume icon to access the slider. Scroll up to increase the volume. Scroll down to decrease the volume. Click the volume icon to Mute/Unmute the video (See Figure 22).

Figure 22 - Preview Video

Deleting a Video

1. Click the video to select it.
2. Press the Delete or Backspace key on your keyboard.
3. The video will be removed from the slide.

Moving a Video

1. Navigate to the slide that contains the video that you would like to move.
2. Click and drag the video to the desired location.

Editing a Video

Sometimes you may need to make changes to your video file. The following instructions explain how to edit a video file from your computer:

To Trim a Video

1. Select the video that you would like to trim.
2. Click the Playback tab on the Ribbon and select the Trim Video option in the Editing group.
3. The Trim Video window will appear. Use the green handle to set the start time (See Figure 24).
4. Use the red handle to set the end time (See Figure 24).
5. Click Play to preview the video (See Figure 24).
6. Click OK when you are done trimming the video (See Figure 24).

Figure 23 - Trim Video Button

Figure 24

Note: You can also adjust the start or end time by clicking the up or down arrows in the Start Time or End Time fields (See Figure 24).

Note: You cannot edit video files that you acquire online.

To Add a Fade In and Fade Out

1. Select the video that you would like to apply fading to.
2. Click the **Playback** tab on the Ribbon, and go to the Fade Duration section.
3. To adjust the Fade In or Fade Out, either type in the desired time, or use the up and down arrow keys.

Figure 30 – Fade In/Fade Out

Video Options

Additional options that control how your video will play are found on the Playback tab, in the Audio Options group. Volume – Change the volume for the video (See Figure 25).

Figure 25

1. **Start** – Control whether you want the video to start automatically or when you click your mouse (See Figure 25).
2. **Play Full Screen** – The video will fill your entire screen while playing (See Figure 25).
3. **Hide While Not Playing** – When the video is not playing, it will be hidden (See Figure 25).
4. **Loop until Stopped** – The video will replay until it's stopped (See Figure 25).
5. **Rewind after Playing** – When the video has finished playing, it will return to the beginning (See Figure 25).

Applying a Video Style

1. To apply a video style, select a video in your presentation.
2. Click the Format tab (See Figure 26).
3. Use your mouse to hover over a video style to see a preview of the style.
4. Select the style of your choice (See Figure 26).
5. The style will be applied to your video (See Figure 26).

Figure 28 - Set Up Show

Slide Show Setup Options

PowerPoint has several options to choose from to set up your slide show.

1. Select the Slide Show tab on the ribbon (See Figure 27).

Figure 27 - Set Up Slide Show

2. Click Set Up Slide Show in the Set Up group (See Figure 27).
3. The Set Up Show window will appear (See Figure 28).
4. Select your desired options for your presentation (See Figure 28).

EXERCISE

1. Videos can be inserted as link

A. True.
B. False
C. I Dont Know

2. Animation setting is:

A. Create Hyperlink
B. Create Animation.
C. I Dont Know

3. Broadcast presentation allows you to

A. Online Presentation.
B. Offline Presentation
C. I Dont Know

4. You could have more than one paragraphs in one slide presentation

A. True.
B. False
C. I Dont Know

5. Slide transitions are motion effects that occur in Slide Show view when you move from one slide to the next during a presentation.

A. True.

B. False

6. To record a sound, you need:

A. Speaker

B. Microphone.

C. I Dont Know

7. Slide Master allows you to:

A. Add New Slide

B. Customize slide layout.

C. I Dont Know

8. A Custom Shows allows user to have more than 1 presentation in file

A. True.

B. False

C. I Dont Know

9. Transitions and Animations is the same function

A. True

B. False.

C. I Dont Know

Explanation

The given statement is false. Transitions and animations are not the same function. Transitions are used to create smooth and gradual changes in CSS properties over a specified duration, while animations are used to create more complex and dynamic effects by defining keyframes and specifying the animation duration and timing function. Both transitions and animations are commonly used in web design to enhance user experience and add visual interest to a webpage.

10. SmartArt do contain 2 items – texts and pictures

A. True

- B. False.
- C. I Dont Know

Explanation

The given statement is false because SmartArt can contain more than just two items. SmartArt is a feature in Microsoft Office that allows users to create visually appealing diagrams, charts, and graphics. It can include various types of items such as text, pictures, shapes, and even videos. Therefore, the statement that SmartArt only contains two items (texts and pictures) is incorrect.

11. The difference between Animation setting After Previous and with Previous is

- A. Sequence OR separate animation.
- B. Sequence AND separate animation
- C. I Dont Know

Explanation

The correct answer is "Sequence OR separate animation". This means that the animation can either occur in sequence with the previous animation or separately, one after another.

12. Create 2 slides with data of your choice and insert a "transition" between the first and second slide

DAY #8

HIDING A SLIDE

If there is a slide that you do not want to show during the Slide Show, PowerPoint offers the option to hide a slide.

1. Select the slide that you wish to hide.
2. Click the Slide Show tab (See Figure 29).
3. Select Hide Slide within the Set Up group (See Figure 29)
4. When presenting your slideshow, the slide will not be seen.

Figure 29 - Hide Slide

PRESENTING YOUR SLIDE SHOW

PowerPoint presentations are meant to be supplemental information, not a script. Review your presentation for content and try to avoid reading directly from the slides. The following instructions explain how to present your slide show.

Starting the Slide Show

1. Select the **Slide Show** tab (See Figure 30).
2. Click **From Beginning** to begin the presentation from the first slide or click **From Current Slide** to begin the presentation from the slide which currently appears in the Slide Preview pane (See Figure 30).
3. You can advance to the next slide by pressing **Enter**, the **Spacebar**, or by clicking the left mouse button. You will also notice left and right arrows in the bottom-left corner of the slide. Clicking one of these arrows will advance the presentation to the next slide or the previous slide.
4. Pressing the **Escape (Esc)** key will end your presentation and return you back to the Normal View.

Note: You can also run the presentation from the current slide by clicking the slide show icon located on the status bar.

Figure 30 - Start Slideshow

PRESENTATION TOOLS

PowerPoint provides tools that are available for use while presenting your slide show.

Once in Slide Show view, icons will appear in the bottom-left corner of your screen (see Figure 37).

Figure 31 - Presentation Tools

- **Back** - Select the Back button to move to the Previous slide in the slide show.
- **Forward** - Select the Forward button to move to the Next slide in the slide show.
- **Pen Tools** - Use the pen tools to make notations on your slides.

- **See All Slides** - To jump to a specific slide, select the **See All Slides** icon, and then select the slide that you would like to go to next.
- **Zoom** - Select the Zoom icon to zoom in on a specific area of the slide.
- **Black or unblack slide** - Allows you to black out a slide during your presentation.

More - Select the More button for additional features available in PowerPoint. Select the More icon to access the taskbar on your computer.

Having the ability to access the taskbar while in slide show view, will allow you to access the Internet or other files or programs during your presentation.

Follow the instructions below to access the taskbar.

Pen Tool

1. Select the Pen Tools icon.
2. From the menu, select the Pen or Highlighter, and then click and drag the mouse to mark on your slides (See Figure 32).
3. Select Laser Pointer to draw attention to certain parts of the slide (See Figure 32).
4. Select Eraser to erase a marking on a slide (See Figure 32).
5. Select Erase All Ink on Slide to erase all of the markings on a slide (See Figure 32).

Figure 32 - Presentation Ink Markings Menu

More

1. Select the More button (See Figure 33).
2. In the menu that appears, select Screen (See Figure 33).
3. Click Show Taskbar (See Figure 33). The taskbar will appear at the bottom of the screen.

Figure 33 - More Menu: Show Taskbar

You can also white out your screen during your presentation.

1. Select the **More** icon (See Figure 34).
2. In the menu that appears, select **Screen** (See Figure 34).
3. Click **White Screen**. Your screen will become completely white (See Figure 34).

Figure 34 - More Menu: White Screen

Note: You can also access any of the presenting tools mentioned above, by right-clicking anywhere on the screen during your slideshow.

EXERCISE

1. The _____ introduces the presentation to the audience.

- A. Title slide.
- B. Home page
- C. Active tab
- D. None of the above

Explanation

The title slide is the first slide in a presentation and serves as an introduction to the audience. It typically includes the title of the presentation, the name of the presenter, and any other relevant information. The purpose of the title slide is to provide an overview of what the presentation will be about and to grab the attention of the audience.

2. The _____ is the strip of buttons across the top of the main window.

- A. Contextual menu
- B. Office Button
- C. Ribbon.
- D. Task manager

3. These are visual movements to the slides as they change one to another

- A. Slide transitions.
- B. Custom animation
- C. Hyperlinks

D. Layouts

4. When you change the layout of a slide, PowerPoint _____ the text and objects.
- A. Deletes
 - B. Retains or keeps.
 - C. Copies
 - D. None of the above
-
5. _____ displays small or thumbnail versions of all your slides, arranged in horizontal rows to make it easier to rearrange slides.
- A. Normal view
 - B. Outline view
 - C. Slide sorter view.
 - D. Notes pages view
-
6. What does the 7 x 7 rule mean?
- A. At least seven lines on a slide and seven words on each line
 - B. No more than seven lines on a slide and seven words on each line.
 - C. No more than seven words on a slide
 - D. No more than seven slides and seven pictures in a presentation
-

Explanation

The 7 x 7 rule means that there should be no more than seven lines on a slide and no more than seven words on each line. This guideline helps to ensure that slides are not overloaded with text, making them more visually appealing and easier for the audience to read and understand. By limiting the amount of text on each slide, presenters are encouraged to focus on key points and use visuals to enhance their message.

7. _____ are visual effects applied to individual items such as graphics or bullet points.
- A. Slide transitions
 - B. Custom animation.
 - C. Hyperlinks
 - D. Custom layouts
-

Explanation

Custom animation refers to the visual effects that are applied to individual items such as graphics or bullet points in a presentation. It allows for the customization of how these elements appear, move, or change on the slide. This feature enhances the visual appeal and engagement of the presentation by adding dynamic and interactive effects to specific elements. Slide transitions, on the other hand, refer to the effects applied to the entire slide when transitioning from one slide to another. Hyperlinks are clickable elements that direct the audience to another location or resource. Custom layouts refer to pre-designed slide templates with specific arrangements of content placeholders.

8. These are all rules to follow when formatting text on a slide except:

- A. Be sure to use dark fonts on dark backgrounds.
- B. Avoid using all capital letters on bullet points
- C. Avoid text with a font size less than 24 point
- D. Make careful colorful choices

Explanation

When formatting text on a slide, it is important to ensure that the text is easily readable. Using dark fonts on dark backgrounds would make the text difficult to read. Therefore, this is a rule that should be followed, making it the exception in this case.

9. The default slide orientation for PowerPoint is:

- A. Landscape.
- B. Portrait
- C. Content layout
- D. Title slide layout

Explanation

The default slide orientation for PowerPoint is landscape. This means that the slides are wider than they are tall, with a width greater than the height. Landscape orientation is commonly used for presentations as it allows for more content to be displayed horizontally on the slide, making it easier for the audience to read and follow along. It also provides a wider canvas for incorporating images, charts, and other visual elements.

10. These are all invalid characters when creating a filename except:

- A. &
- B. ?

C. *

D. /

11. These are things that visual aids can do except:

- A. Improve communication effectiveness
- B. Improve audience's perceptions of the presenter
- C. Improve the speaker's confidence
- D. Improve the speaker's articulation of words.

Explanation

Visual aids, such as slides or charts, can enhance communication effectiveness by providing visual support and making information more understandable. They can also improve the audience's perceptions of the presenter by making the presentation more engaging and professional. Additionally, visual aids can boost the speaker's confidence by providing a visual reference and reducing the need for memorization. However, visual aids cannot directly improve the speaker's articulation of words, as this is primarily dependent on the speaker's vocal skills and clarity of speech.

12. _____ allows you to point to a gallery choice and see its effect in the document.

- A. Active tab
- B. Quick Access Preview
- C. Live Preview.
- D. None of the above

Explanation

Live Preview allows you to point to a gallery choice and see its effect in the document. This feature is commonly used in software applications, such as Microsoft Office, where users can preview the formatting or style changes before applying them to the actual document. With Live Preview, users can visually assess the impact of their choices without making permanent changes, ensuring that they make the right decision before applying any modifications.

13. For this exercise, you will create a PowerPoint presentation.

The topic of your presentation will be: **"My Dream Job."**

Do Internet research and obtain information about your career.

➤ What type of work would you do?

- What knowledge and skills are necessary to do the job well?
- How much does it pay?
- Where will you work?
- What appeals to you about this job?

You will need to apply your creative and research skills on this assignment.

- i. Create a minimum of 10 slides with a slide theme appropriate for the topic.
- ii. Utilize WordArt on your title slide for the title.
- iii. In the notes section on your title slide, type in the seven (7) “Plan Ahead” decisions to make when creating your presentation.
- iv. Limit the amount of text per slide to approximately 6 lines with 6 words or less per line.
- v. Apply a slide color scheme appropriate to your theme.
- vi. Use at least two different slide layouts
- vii. Insert clip art or photo to each slide.
- viii. Apply a different picture style or picture effect to each picture in your presentation.
- ix. Select a transition and apply it to all slides.
- x. Insert a header on notes/handouts that includes your name and also insert a date/time that updates automatically.
- xi. Insert a footer on slides with your name and slide numbers.
- xii. On one slide include a table of potential salaries gathered from your research.
- xiii. Apply the same bullets and/or numbering on all slides that require them.
- xiv. Apply appropriate animation to at least 2 slides.
- xv. On two slides insert appropriate shapes with text. These will count as clip art as noted in requirement vi.
- xvi. On one slide insert an audio file from the following web site: <http://brainybetty.com/soundsforpowerpoint.htm> Download an appropriate file to your computer folder. Set the audio to automatically play when the slide is shown.
- xvii. Provide a bibliography in MLA format of all sources on the last slide of your presentation.
- xviii. Ensure error-free text.

- xix.** Include a screen shot of all websites that you used for research. Paste these into a separate PowerPoint file. One web site per slide
